

HYDROLOGY

HYDROLOGICAL (GAUGING) STATIONS for water level, temperature or water flow measurements are located directly on the banks of watercourses and reservoirs, in boreholes or wells, being exposed to difficult weather and terrain conditions.

High humidity and difficult installation conditions require solid compact housing and long-time battery powered solution – all this requirements are fulfilled by e-HydroLOG.

e-HydroLOG solutions allow continuous operation of measuring station throughout the year under unfavourable environment conditions.
