

# NATURAL ENVIRONMENT

ENVIRONMENTAL MEASUREMENTS require an individual approach to research. Our solutions work well here as a result of great flexibility while creating an individual project. The devices can be easily camouflaged in the field, so they are less exposed to vandalism.

Our solutions allow you to test even the most sophisticated environmental parameter, starting with water physio-chemistry, fruit and tree diameter, radiation, air toxin concentration, ending in oxygenation of the soil. Virtually, any measurable environmental parameter, can be measured by our device.
